

EXCESSIVE WATER BILL POLICY

If a residential water bill is more than 4 times the average quarterly bill for a particular property and the property owner can prove to the Authority the subject property has experienced a leak caused by burst pipe, underground leak or some other circumstance that created excessive water use and has proof that the problem has been corrected. Instead of paying the bill based upon the actual water usage, the customer will instead pay an amount equal to 4 times the customer's average quarterly bill. This policy can only be used one time per customer.

See Exhibit "A" for calculation

EXCESSIVE SEWER BILL POLICY

If a residential sewer bill is more than 4 times the average quarterly bill for a particular property and the property owner can prove to the Authority the subject property has experienced a leak caused by burst pipe, underground leak or some other circumstance that created excessive water use and has proof that the problem has been corrected. Instead of paying the bill based upon the actual water usage, the customer will pay their average sewer bill based on the Authority's sewer rate, and the balance of the sewer gallons over the average bill will be charged at the rate that the Authority is charged by the sewer treatment plant. This policy can only be used one time per customer.
